

POTS REPLACEMENT FIELD GUIDE

Your copper lines are going away. Your fire alarm still needs a dial tone.

The FCC released carriers from maintaining POTS lines. Prices climb 15–30% a year, new installs are refused, and repairs stretch into weeks. Here is what to replace, what it costs, and what we would put in your building.

The cost of standing still

POTS a decade ago ~\$40/line

POTS today \$100–\$300+/line

Modern replacement from \$35/line

What changed, and why now

- ▶ Carriers are no longer obligated to maintain copper
- ▶ New installs are increasingly refused outright
- ▶ Repair windows have gone from days to weeks

STILL ON A COPPER LINE, ALMOST EVERYWHERE

Fire alarm panels

Elevator phones

Burglar alarms

Fax machines

Paging & intercom

Card terminals

Back-of-house phones

Dial-out backups

💰 Our guidance costs you nothing — providers compensate us directly, never the customer.

CHOOSE YOUR REPLACEMENT PATH

Two ways to give the equipment its dial tone back

Most replacements use one of these. Compliance-critical lines go first.

Wireless POTS replacement

\$35–\$75 per line, per month

A small device with a cellular SIM sits where the copper line entered the building. Your equipment plugs in exactly as before.

Best for fire alarm panels, elevator emergency phones, standalone analog dial tone

VoIP with an ATA

\$15–\$30 per line, ATA \$80–\$300 once

A small box converts internet-delivered voice into analog dial tone for equipment that only speaks analog.

Best for fax machines, paging systems, back-of-house phones

WHAT INSERO RECOMMENDS

Ooma AirDial, in most buildings

Flat \$35 per line

It does both jobs at once — analog dial tone delivered over the internet, with cellular backup built in. Your existing equipment plugs in unchanged.

- ✓ UL 864 listed for fire alarm monitoring
- ✓ One device handles multiple lines
- ✓ Cellular backup if the internet drops
- ✓ Hardware included, no surprise charges

Where it isn't the fit: weak cellular signal at your address — we check that in every quote — or very high-volume voice, where UCaaS is the better answer. We work with multiple providers and will say so when something else fits.

Get a free POTS inventory and quote

Zero cost to you — providers compensate us directly, never the customer.

- 🔍 We inventory your lines
- 📄 Competing quotes, compliant options
- ✓ We manage install and number porting
